COLOUR

The Primary colour of the NCBA brand is Cocoa (Pantone® 412), Sky (Pantone® 298), and White, with Sun (Pantone® 102) as an Accent colour and the rest as Secondary colours.

This shows all of the colours and their associated tints available for use in the design and production of manufactured or printed collateral and digital material.

Prominence is given to the CMYK and RGB colours as these will be the most commonly used, together with Black and White.

The percentages of the CMYK colours are based on the given Pantone® references and have been rounded off to the nearest decimal point. The RGB references are based directly on the CMYK percentages given here. Where single or 'spot' colours are required in production, then the specified Pantone® colours should be used.
